# Lightweight, compact design with reduced height

**High repeatability:  $\pm 0.01$  mm**

## Auto switch capable

A wide variety of solid state auto switches can be mounted using the body's side mounting grooves. Selections include 2-color indication and water resistant types.

## Easy alignment when mounting

Positioning pin holes are provided on the top of the gripper.

**Can be mounted from two directions**

**Smaller auto switch mountable**

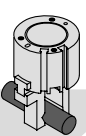

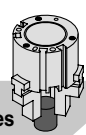

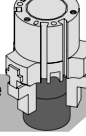

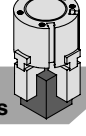

## Employs wedge cam construction

The wedge cam mechanism allows strong gripping force to be obtained from a compact design.

# Series MHS Model Selection

## Model Selection

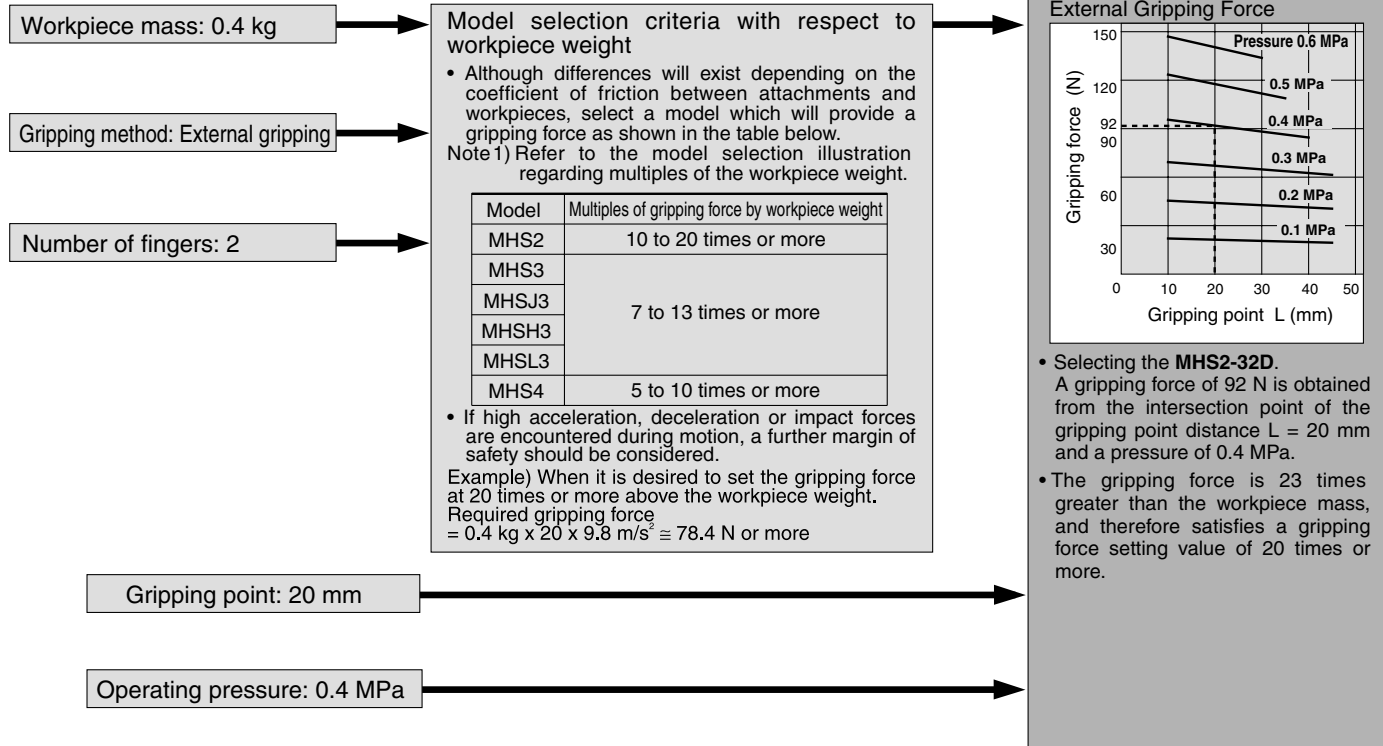

### Selection Procedure

### Step 1 Confirmation of Gripping Force

#### Example

Note) For **Step 2**, refer to the gripping point for the effective gripping force of each model.

## Model Selection Illustration

When gripping a workpiece as in the figure to the left, and with the following definitions,

**n**: Number of fingers

**F**: Gripping force (N)

**μ**: Coefficient of friction between attachments and workpiece

**m**: Workpiece mass (kg)

**g**: Gravitational acceleration (= 9.8 m/s<sup>2</sup>)

**mg**: Workpiece weight (N)

the conditions under which the workpiece will not drop are

$$n \times \mu F > mg$$

and therefore,

$$F > \frac{mg}{n \times \mu}$$

With “a” as the safety margin, **F** is determined as follows:

$$F = \frac{a \times mg}{n \times \mu}$$

## Multiples of Gripping Force by Workpiece Mass

### Number of fingers: When n = 2

- SMC performs calculations allowing for impacts which occur during normal transfer, etc., using a safety margin of a = 4.

When $\mu = 0.2$	When $\mu = 0.1$
$F = \frac{mg}{2 \times 0.2} \times 4$ $= 10 \times mg$	$F = \frac{mg}{2 \times 0.1} \times 4$ $= 20 \times mg$
↑ <b>10 x workpiece weight</b>	↑ <b>20 x workpiece weight</b>

Note) • Even in cases where the coefficient of friction is greater than  $\mu = 0.2$ , for safety reasons, SMC recommends selecting a gripping force which is at least 10 to 20 times the workpiece weight.

- If high acceleration, deceleration or impact forces are encountered during motion, a further margin of safety should be considered.

## Gripping Point

- The workpiece gripping point distance should be within the gripping force ranges given for each pressure in the effective gripping force graphs below.
- If operated with the workpiece gripping point beyond the indicated ranges, an excessive offset load will be applied to the sliding section of the fingers, which can have an adverse effect on the service life of the product.

## Effective Gripping Force

- Indication of effective gripping force  
The effective gripping force shown in the graphs to the right is expressed as  $F$ , which is the thrust of one finger, when both fingers and attachments are in full contact with the workpiece as shown in the figure below.

## Gripping Point

- The workpiece gripping point distance should be within the gripping force ranges given for each pressure in the effective gripping force graphs below.
- If operated with the workpiece gripping point beyond the indicated ranges, an excessive offset load will be applied to the sliding section of the fingers, which can have an adverse effect on the service life of the product.

## Effective Gripping Force

- Indication of effective gripping force  
The effective gripping force shown in the graphs to the right is expressed as  $F$ , which is the thrust of one finger when all 3 of the fingers and attachments are in full contact with the workpiece as shown in the figure below.

## Dimensions

Technical drawing of the front view of a rectangular component. The component has a central rectangular body with two circular ports. The top port is labeled 'P' and '(Finger opening port)'. The bottom port is labeled 'P' and '(Finger closing port)'. The distance from the left edge to the center of the top port is labeled 'CB'. The distance from the center of the top port to the right edge is labeled '7'. The component is shown with a dashed line indicating a horizontal centerline.

## Gripping Point

- The workpiece gripping point distance should be within the gripping force ranges given for each pressure in the effective gripping force graphs below.
- If operated with the workpiece gripping point beyond the indicated ranges, an excessive offset load will be applied to the sliding section of the fingers, which can have an adverse effect on the service life of the product.

## Effective Gripping Force

- Indication of effective gripping force  
The effective gripping force shown in the graphs to the right is expressed as  $F$ , which is the thrust of one finger when all 3 of the fingers and attachments are in full contact with the workpiece as shown in the figure below.

## Gripping Point

- The workpiece gripping point distance should be within the gripping force ranges given for each pressure in the effective gripping force graphs below.
- If operated with the workpiece gripping point beyond the indicated ranges, an excessive offset load will be applied to the sliding section of the fingers, which can have an adverse effect on the service life of the product.

L: Gripping point distance

## Effective Gripping Force

- Indication of effective gripping force  
The effective gripping force shown in the graphs to the right is expressed as  $F$ , which is the thrust of one finger when all 3 of the fingers and attachments are in full contact with the workpiece as shown in the figure below.

## Gripping Point

- The workpiece gripping point distance should be within the gripping force ranges given for each pressure in the effective gripping force graphs below.
- If operated with the workpiece gripping point beyond the indicated ranges, an excessive offset load will be applied to the sliding section of the fingers, which can have an adverse effect on the service life of the product.

## Effective Gripping Force

- Indication of effective gripping force  
The gripping force shown in the tables represents the gripping force of one finger when all fingers and attachments are in contact with the workpiece. The gripping force of Series MHS4 is the same as Series MHS2 while one pair of opposite fingers is used to grip the workpiece and the other pair of fingers is used for positioning.

## Auto Switch Installation Examples and Mounting Positions

Various auto switch applications are possible through different combinations of auto switch quantities and detecting positions.

### 1) Detection when Gripping Exterior of Workpiece

Detection example		1. Confirmation of fingers in reset position	2. Confirmation of workpiece held	3. Confirmation of workpiece released
Position to be detected		Position of fingers fully opened 	Position when gripping a workpiece 	Position of fingers fully closed 
Operation of auto switch		Auto switch turned ON when fingers return. (Light ON)	Auto switch turned ON when gripping a workpiece. (Light ON)	When a workpiece is held (Normal operation): Auto switch to turn OFF (Light not illuminating) When a workpiece is not held (Abnormal operation): Auto switch to turn ON (Light illuminating)
Detection combinations	One auto switch			
				
	Two auto switches			
				
How to determine auto switch installation position		Step 1) Fully open the fingers. 	Step 1) Position fingers for gripping a workpiece. 	Step 1) Fully close the fingers. 
At no pressure or low pressure, connect the auto switch to a power supply, and follow the directions.		Step 2) Insert the auto switch into the auto switch installation groove in the direction shown in the following drawing. 		
Step 3) Slide the auto switch in the direction of the arrow until the indicator light illuminates.		Step 3) Slide the auto switch in the direction of the arrow until the indicator light illuminates. Move the switch further 0.3 to 0.5 mm in the direction of the arrow and fasten it. In case of 2-color indicator type, fasten it at the location when the indicator light color changes from red to green.		
		Position where light turns ON 		
Step 4) Slide the auto switch in the direction of the arrow until the indicator light goes out.		Position to be secured 		
				
Step 5) Move the auto switch in the opposite direction and fasten until the indicator light illuminates. Move the switch further 0.3 to 0.5 mm beyond the position where the indicator light illuminates. In case of 2-color indicator type, fasten it at the location when the indicator light color changes from red to green.				
Position where light turns ON 				
Position to be secured 				

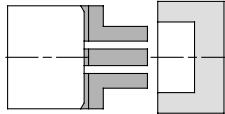

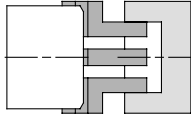

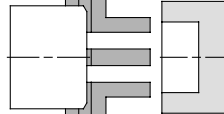

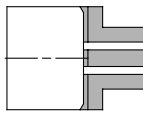

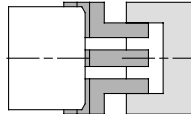

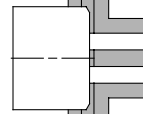

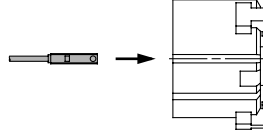

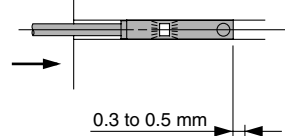

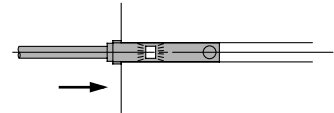

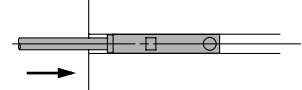

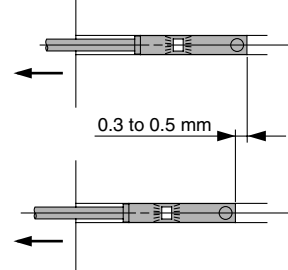

Note 1) It is recommended that gripping of a workpiece be performed close to the center of the finger stroke.

Note 2) When holding a workpiece close at the end of open/close stroke of fingers, detecting performance of the combinations listed in the above table may be limited, depending on the hysteresis of an auto switch, etc.

To set the auto switch, insert the auto switch into the installation groove of the gripper from the direction indicated in the following drawing. After setting the position, tighten the attached auto switch mounting set screw with a flat head watchmaker's screwdriver.

Note) Use a watchmaker's screwdriver with a grip diameter of 5 to 6 mm to tighten the auto switch mounting screw. The tightening torque should be about 0.05 to 0.15 N·m.

### Applicable models:

MHS2-32, 40, 50, 63  
 MHS3-32, 40, 50, 63, 80, 100, 125

- (1) To set the auto switch, insert the auto switch into the installation groove of the cylinder as shown below and set it roughly.
- (2) Insert the auto switch into the auto switch bracket installation groove.
- (3) After confirming the detecting position, tighten the set screws (M2.5) attached to the auto switch and set it.
- (4) Be sure to change the detecting position in the state of (2).

### Mounting Air Grippers/Series MHS

#### How to Mount the Attachment to the Finger

Make sure to mount the attachments on fingers with the tightening torque in the table below by using bolts, etc., for the female threads on fingers.

#### Series MHSJ3, MSH3

Model	Applicable bolts	Max. tightening torque N·m
MHSJ3-16D MSH3	M3 x 0.5	0.88
MHSJ3-20D MSH3	M3 x 0.5	0.88
MHSJ3-25D MSH3	M3 x 0.5	0.88
MHSJ3-32D MSH3	M4 x 0.7	2.1
MHSJ3-40D MSH3	M4 x 0.7	2.1
MHSJ3-50D MSH3	M5 x 0.8	4.3
MHSJ3-63D MSH3	M6 x 1	7.3
MHSJ3-80D MSH3	M6 x 1	7.3

Model	Applicable bolts	Max. tightening torque N·m
MHS□-16D	M3 x 0.5	0.59
MHSJ3-20D		
MSH3-25D		
MHSL3-32D	M4 x 0.7	1.4
